2. Re-ordering Services.....4

3. Aliasing in the Savant Pro App and Remote5

 3.1. Example 1: Layer 1 Alias5

 3.2. Example 2: Layer 2 Alias6

Important Notice7

1. Service Ordering and Aliasing Window Overview

After the configuration is set and the services are created, from the Blueprint menu bar, select **Tools > Review > Savant App Service Ordering**. This opens a drop-down menu displaying all the services available from the configuration. Each of the fields are described below.

A

Lists all the services the Blueprint configuration generated. The order of the services in this window does not represent the ordering of services in the Savant Pro App unless the Use Custom Order button is checked. Once checked, the order in this window represents the order in the Savant Pro App.

B

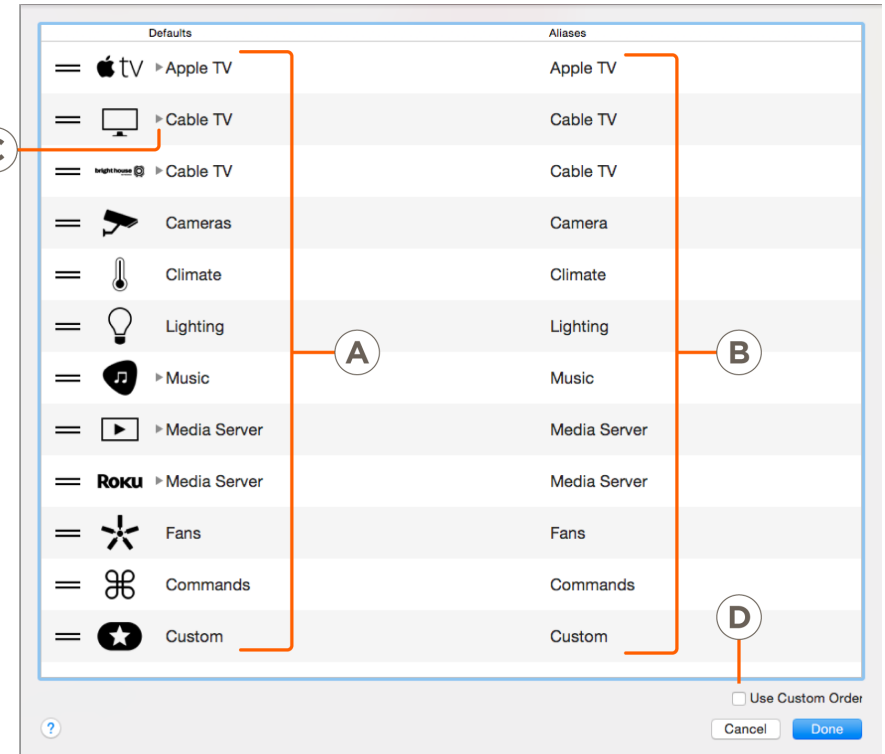

How each service is represented (alias) in the Savant Pro App is displayed. There are two layers of aliasing supported. Both layers are described in the examples in the [Aliasing](#) section below.

C

HELPFUL INFORMATION! If the same service is listed more than once in this window (i.e. two Cable TV services), the reason for this is the branding icon was changed on one of the services (Tools > Branding Icons). See Cable TV services listed in image to right.

C

D

Checked

Changing the order in the Savant App Service Ordering window changes the ordering of the service icons in the Savant Pro App. The order of the services in this window represents the ordering of services in the Savant Pro App.

Note: The configuration must be uploaded to the Host after changes are made.

Unchecked
(Default)

Changing the order of the services in the Savant App Service Ordering window will not affect the ordering in the Savant Pro App. The order of the services in this window do not represent the ordering of services in the Savant Pro App.

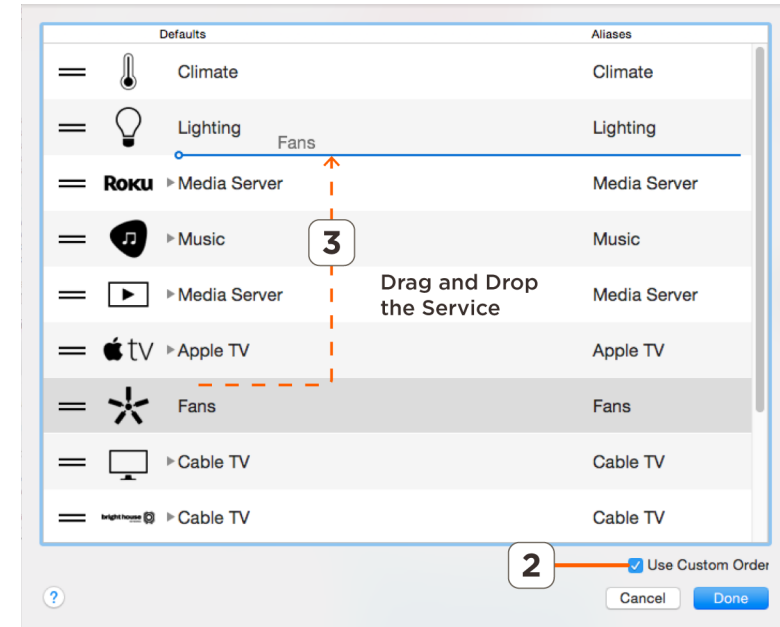

Additional Information:

- The Service Ordering window described above only affects the Savant Pro App. Modifying the ordering or aliasing of services in TrueControl II is achieved using the Service Preferences Table (**Tools > Review > Service Ordering and Aliasing Preferences**)

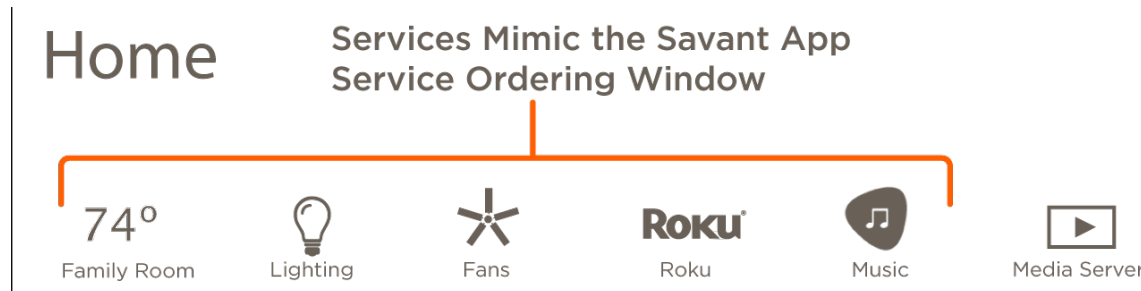

2. Re-ordering Services

The Services generated in the Blueprint configuration can be re-arranged in the Savant App Service Ordering drop-down window. Follow the steps below to do this.

1. Select **Tools > Review > Savant App Service Ordering** from the Blueprint menu bar. This opens the Savant App Service Ordering window (image to right).
2. Add a check to the **Use Custom Order** checkbox located in the bottom right side of window.
3. Drag and drop one or more of the services into a desired order. In the example, the Fans service was moved to be the third icon listed.
4. Continue dragging and dropping the Services to a desired position. In this example the first five services are: Climate, Lighting, Fans, Roku, and Music.
5. Select **Done** when complete.
6. Upload the configuration with the re-ordered list of services to the Host.

7. As shown below, the icons are now listed in the order created.

Additional Information:

- In addition to the Home page as shown above, the ordering of services occurs in the room views as well.
- If the **Use Custom Order** checkbox is NOT checked, the ordering of the Services is determined by how much each Service is used (the Savant App learns over time which services are used more and which are used less).
- If the **Use Custom Order** checkbox is unchecked after the services were reordered, the services will revert to how they were initially ordered. System will now order services predicated on use.

3. Aliasing in the Savant Pro App and Remote

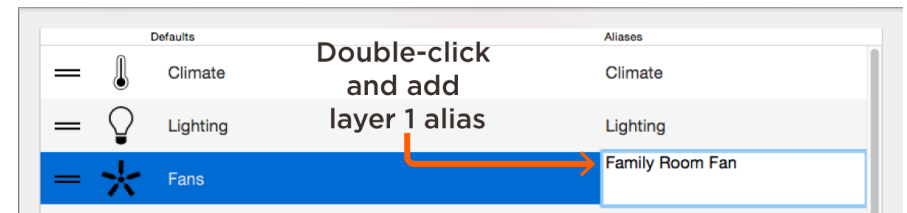

In the Savant Pro App and in the Pro Remote, each service is given a label. For example, looking at the Home screen in the previous section above, each service is given the label shown below it. These labels can be modified so users can distinguish one service from another. The Savant App supports two layers of aliases. Below are a few examples of where services can be given an alias.

- On the Home screen, the labels for each can be modified. Any changes made to these labels would be a first level alias.
- When there is more than one service of the same type (e.g. Cable TV in both Family Room and Master Bedroom), selecting the icon for the Cable TV from the Savant Pro App Home screen will present a pop-over with all available Cable TV service paths. The labels presented in the pop-over can be changed to distinguish which room the service is in. This would be a second layer alias.

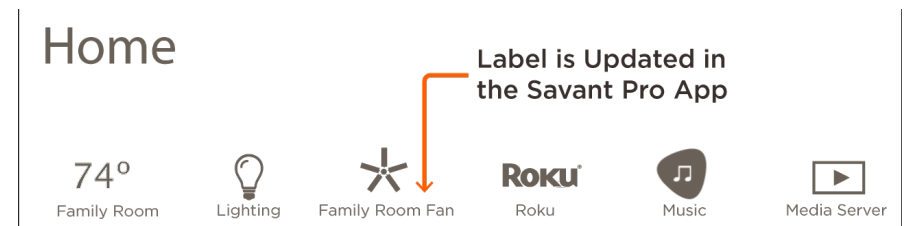

Setting these aliases is done using the Savant App Service Ordering window (**Tools > Review > Savant App Service Ordering**).

3.1. Example 1: Layer 1 Alias

1. Select **Tools > Review > Savant App Service Ordering** from the Blueprint menu bar. This opens the Savant App Service Ordering window (image to right).
2. Double-click the name under the **Aliases** column and enter a new label. The label entered is a first level alias and displayed in both the Home and Room view pages in the Savant Pro App (see image to right)
3. Select **Done** button when complete (not shown in image).
4. Upload the modified configuration to the Host.

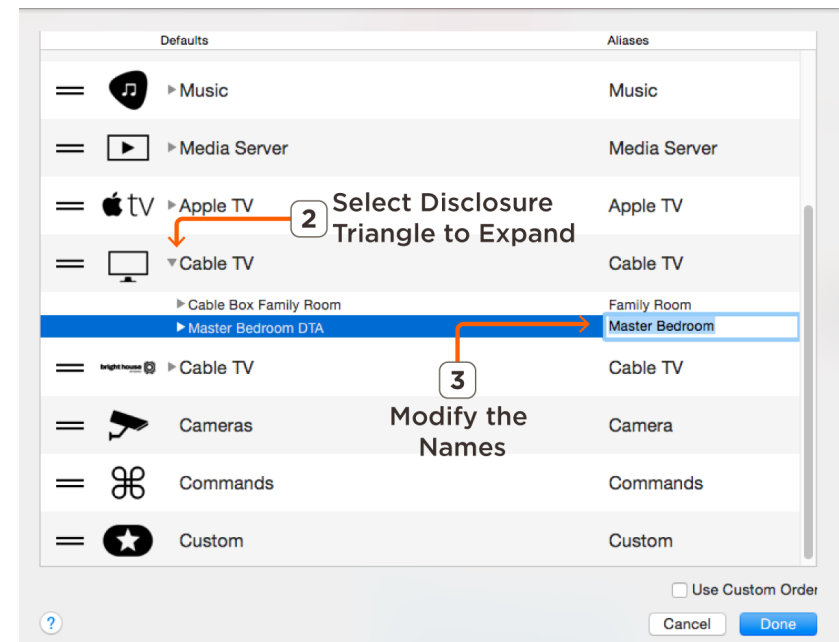

5. Open Savant Pro App. Verify the service is displayed using the alias entered. The alias will be changed in both the Home and Room view pages.

3.2. Example 2: Layer 2 Alias

The example below shows how to create an alias when there is more than one of the same service. Cable TV is used in this example.

1. Select **Tools > Review > Savant App Service Ordering** from the Blueprint menu bar. This opens the Savant App Service Ordering window (image to right).
2. Select the disclosure triangle for a service that is used in more than just one room/zone. In this example, the Cable TV service is in both the Family Room and the Master Bedroom.
3. Double-click the label under the **Aliases** column and enter an alias for each service path. In this example, the aliases created are the name of the room/zone.
4. Select **Done** button when complete (not shown in image).
5. Upload the modified configuration to the Host.

6. Open Savant Pro App. From the Home page, select the Service just altered from the steps above and a pop over with the two service paths will appear.
7. Verify the services are displayed using the alias created. The alias will be changed in the Home view pages. Tap the alias to go to that service.

Additional Information:

- The Use Custom Order button does not need to be checked to modify the alias information
